ON THE SAME PAGE 2.0

Field Guide for Implementing College-and-Career Ready Standards

through Labor-Management Collaboration
Preface

Since 2011, six national organizations, along with the U.S. Department of Education, have been working together to support labor-management collaboration in states and school districts throughout the country to advance student learning. The organizations include: AASA, The School Superintendent’s Association; American Federation of Teachers (AFT); Council of Chief State School Officials (CCSSO); Federal Mediation and Conciliation Service (FMCS); National Education Association (NEA); and National School Boards Association (NSBA). Based on the belief that supporting good governance of public education in our nation’s school districts is a mutual responsibility, these organizations have jointly planned several conferences, and collaborated on creation of a document titled “On the Same Page.”

The first On the Same Page document was intended to serve as a tool to support state level agencies and district organizations in collaboratively developing a plan that sets direction and determines support for implementation of college-and-career-ready standards. Since the writing of the original document, college-and-career ready standards have been developed in a variety of content areas. The importance of working collaboratively for the good of our students and our country is of paramount importance as new standards continually emerge.

Our theory of action at the start of the collaborative partnership, as well as today as our country continues moving forward, is to continue listening to the field and responding to needs by jointly developing tools and resources in support of the work. Towards that end, a second edition of the original On the Same Page document has been collaboratively designed to support district, school, and classroom educators deeply understand and implement the intent of college-and-career ready standards.

This document, On the Same Page 2.0, is provided as a guide for educational stakeholders to work at a district, school, and/or classroom level to deeply implement higher, more rigorous standards systematically and systemically. The ideas, suggestions, and actions provided in this document are not meant to be all-inclusive. This document is provided as a guide to trigger thought, research, and conversation around effective collaborative practice for design of a teaching and learning system capable of delivering on the promise made to the children of our country.

"The leaders who work most effectively, it seems to me, never say "I." And that's not because they have trained themselves not to say "I." They don't think "I." They think "we"; they think "team." They understand their job to be to make the team function. They accept responsibility and don't sidestep it, but "we" gets the credit. This is what creates trust, what enables you to get the task done."

-Peter F. Drucker
Introduction to the Document

When students in today’s schools graduate, they will enter a world where the expectations for success have never been higher. This is true whether they continue their education in a university or some other post-secondary school experience, or enter the workforce directly. Ours is no longer a world where an eighth grade education, or even a high school diploma, can be seen as a guarantee of the knowledge and skills needed to thrive in a 21st century economy. Recognizing this, education leaders in states and school districts have embraced new, more rigorous “college- and career-ready” standards that articulate the hope and promise that students will leave school ready to meet this challenge. These new standards are much more than higher expectations for our students; they are a challenge to the workforce of educators – not just teachers, but principals, administrators and professionals in support roles.

Implementing College-and-Career Ready Standards

The purpose of a teaching and learning system is to deliver a guaranteed, viable, and rigorous curriculum to all students. Intentional design of the system begins with deep understanding of what the standards require. The standards must be collaboratively defined to ensure consistent implementation in schools and classrooms. The next step is selection and/or design of a balanced system of assessments capable of measuring the knowledge, skills, and thinking required by the standards.

Once the standards and assessments are in place, investigation of research-based instructional frameworks and effective instructional practices can then be pursued. Following the identification of instructional frameworks and practices, the committee/team begins to focus on review and selection of resources capable of supporting students to reach the intent of the standards. Collaboratively working through a process of analyzing the alignment of resources to the college-and-career ready standards will aid selection of tools strong enough to support educators in their work for student success.

The Importance of Collaboration

Collaboration among educators is essential for the effective implementation of college-and-career ready standards. It is not a new value within education, but it becomes increasingly important as the world becomes more connected and we elevate the expectations for student success. Collaboration is based on the belief that a common goal is best achieved when individuals work together. Union-management partnerships can transform education when meaningful work for the improvement of student achievement is the focus, “collaboration between labor and management around common issues such as quality can be a tremendous competitive advantage” (Rubinstein, Saul, Strengthening Partnerships, American Educator, Winter 2013-2014) Collaborative partnerships to manage and improve the teaching and learning system foster a shared responsibility for the academic success of all students.

For our students to succeed, we must do transformative work. Students will not meet this new challenge if we, as a profession, act as individuals, returning to our classrooms and offices to work in autonomous isolation from one another. Rather, our students will meet these expectations only if we gather together and collaborate to rethink what students are learning, how they are taught, and how the system as a whole supports them in that effort. This booklet offers a set of planning tools that will help teams of educators develop a common vision of how labor and management can work together to meet the challenge of college-and-career readiness for all students.
Figure 1 illustrates two important information flows required to ensure deep collaboration needed within a district throughout the design and implementation of a teaching and learning system. Communication Flows and Feedback Loops are critical for ensuring both continuous improvement as well as ownership by all stakeholders.

The center column in Figure 1 identifies the various committees/teams or individuals involved in designing, guiding or implementing the teaching and learning system.

The arrow on the left side indicates the flow needed for continuous communication about the work. This communication keeps all teams and individuals informed about the work being accomplished by all teams and individuals.

The arrow on the right indicates the loop needed for continuous feedback around successes, challenges, and needs as design and implementation of the work occurs. Each committee/team and individual has information critical to successful implementation and continuous improvement of the work. Creating a feedback loop capable of capturing this information creates ownership for the work across the organization, and places value on the knowledge and expertise held by all who will be impacted by the implementation.

**Figure 1 Multi-Layered Team Information Flow**
Organization of the Document

There are three aspects inter-connected in the work. The aspects are: stages of the process, stakeholders included in each of the stages, and recurring components for consideration by stakeholders within each stage. The work progresses through each of the different stages while the stakeholders and the components to address within each stage remain consistent.

For the purpose of a thorough, collaborative review of teaching and learning systems, the following stages are described within this document:

- Stage 1: Forming Committees/Teams
- Stage 2: Understanding and Implementing Standards
- Stage 3: Determining Assessment Methods and Practices
- Stage 4: Aligning Instructional Practices with Standards and Assessments
- Stage 5: Reviewing and Selecting Resources
- Stage 6: Engaging Parents/Guardians and Community
- Stage 7: Establishing a System for Continuous Improvement

Key stakeholders that need to work collaboratively throughout the process within each stage include:

- District Administration
- Union Leadership
- School Leadership Team
- Teacher, Specialist and School Staff
- Student

A level of responsibility and ownership exists for these key stakeholders at each stage of development. "When employees are allowed to contribute meaningfully to solving problems and making decisions, better solutions are found, and those solutions are implemented more effectively because people are more committed to solutions they have a hand in developing." (Rubinstein, Saul, *Strengthening Partnerships*, American Educator, Winter 2013-2014)

The components to be addressed are ones that recur within each stage in the process across all of the key stakeholder groups. Each of these components is listed below. Included with each component is a question that guides the type of information included on the tables located in the appendix.

- Awareness: What should the stakeholder know, or find out, about current practice within this stage?
- Planning: What should the stakeholder think about when designing steps to lead the work within this stage?
- Professional Learning Topics: What should the stakeholder be knowledgeable about regarding this stage?
- Implementation and Monitoring: What should the stakeholder do and/or watch for within this stage?
- Communication and Feedback: What should the stakeholder share with other key stakeholders about the work within this stage?

Figure 2, on page 9, illustrates the intersection of the three aspects involved in the work with each of the key stakeholder groups central to collaborative design and implementation of college-and-career ready standards across a system.
**Role of the School Board**

As these pages show, the core work of the labor-management partnership is largely the job of educators whose training and expertise are needed to assure that assessments, curriculum and instruction are fully aligned with new, rigorous standards. For this reason, this document identifies district administration, union leadership, school leadership team, teachers/specialists/school staff and students as the “key stakeholders” and describes specific responsibilities for each. But other stakeholders have important roles to play too, beginning with the school board.

The school board sets the tone for a collaborative environment in the district by leading in partnership with the superintendent and demonstrating an openness to the recommendations of collaborative teams. The board’s specific responsibilities include the following:

**Accountability.** School board accountability in this effort means making the implementation of high standards a district priority, providing time and support for teams to collaborate, monitoring progress and reporting to the public.

**Policy.** The school board is responsible for policy regarding the allocation of resources, including money, time and staffing, to support effective standards implementation for all students. The board further makes decisions informed by team recommendations about curriculum, assessments and professional development, as well as data collection, how data will be used, and who has access to it.

**Community engagement.** School boards represent the community in school governance. They are well-positioned to elicit community feedback on the various facets of standards implementation. In addition, the board communicates the importance of the work to the community and the press, and keeps them apprised of progress.

**Role of Parents/Guardians**

The role of parents/guardians in the process of teaching and learning is a vital one for educators to foster and continually nurture. Ongoing communication to, and feedback from, parents/guardians must be intentionally planned and monitored. A successful partnership between home and school includes purposeful two-way exchanges of information about learning expectations, needs, and progress of students. This mutual give-and-take of information needs to occur on a regular basis in both formal and informal ways.

This document outlines actions and processes which can actively involve parents/guardians in the education of their children. Stage 6, Engaging Parents/Guardians and the Community, identifies possible ways to employ conversations between home and school. Implementing a well-articulated, inclusive and reciprocal system of communication between home and school honors the essential role parents/guardians play in the teaching and learning system.
Structure of the Stages

Each stage of the review process is structured in the same way. The structure for each stage of the document includes the following parts: Outcome, Guiding Questions, Actions and Processes to Consider, and Resource Links. The sub-headings below provide a brief description of what information is included in each of the parts.

Outcome

Each stage includes an “Outcome” statement. The Outcome indicates what the final product, end result, or conclusion based on logical thinking should be for that particular stage in the process.

Guiding Questions

A series of targeted questions can work to prompt actions toward a larger purpose. Carefully sequenced questions can guide a keen examination of pertinent topics or issues. The Guiding Questions in this document prompt thinking about the basic steps, information, and focus points to be considered within each stage in the teaching and learning review process. Guiding questions help to focus attention on the critical attributes to consider within each stage.

Suggested Work Flow Graphic

A visual image of main elements within a complex process can offer a sense of sequence for the process. Each stage in the process includes a basic suggestion for the flow of work within the stage. The graphic offers a broad-stroke glance at the work, but the explicit details within each element of the work cannot be made evident in a simple graphic. The tables located in the appendix illustrate the deeper thinking and work that needs to take place in order to achieve each of the broader steps.

Resource Links

The work of educators to transform educational opportunities for students is a daunting and challenging task. Many states, educational organizations, and private foundations have supported development of resources for districts, schools, and teachers to utilize in meeting that challenge. While there are numerous high quality resources available, finding an appropriate resource at the right time can be both difficult and time-consuming for the typical educator.

Each of the stages detailed in this document include resource links specific to the stage. Linking the resources by stages in the process enables educators to locate resources that target the work occurring at that point in time. Providing links associated to the work at hand is intended to focus and support educators. (Note: All links were active at the time of publication.)

Appendices

The complexity and scope of curriculum work can be staggering to think about and accomplish. Multiple variables are involved in the collaborative design of a high-quality teaching and learning system. Those variables include people, relationships, time, and space. Leaders working within the process must be highly organized and able to think bigger than a single classroom. All leaders must be able to think about scaling the work to a system level for design, implementation, support, and monitoring for success. “To the degree those who are contributing to curriculum work can see what is happening and understand how their part is contributing to the whole effort, they will be motivated to make the effort succeed.”

- Jon Wiles from Leading Curriculum Development (2009)
part is contributing to the whole effort, they will be motivated to make the effort succeed.” (Wiles, Jon, *Leading Curriculum Development*, pg. 20, 2009)

The first five sections of the appendix include tables which provide specific details for each stage of the review process organized by stakeholder. The tables delineate possible steps around processes, actions, engagement, and thinking. The possible steps are provided across the components of Awareness, Planning, Professional Learning Topics, Implementation and Monitoring, and Communication and Feedback. The provided points are for consideration and adaptation as appropriate for each school system.

The final three sections provide the main webpage for each organization included on the resource tables within the first portion of the document; names of key thought leaders whose research suggests effective practices organized by stage; and a glossary of terms used within this document. The intent of this information is to inform leaders and committees/teams about the additional research they may need to consider in the continuous improvement of the teaching and learning system.

**Possibilities for Use of this Document within Different Size Districts**

Each of the stages in the document presents processes for work organized and facilitated within committees/teams formed at the district level. Details provided on the tables for each stage depict how the various stakeholders contribute to, or participate in, the work of that stage. The structure of district-level teams, with grade-level representation from each school in the district, is a viable option for medium size districts but may be difficult to manage in small or large districts.

Small districts may be able to involve all staff members in the work. If this is an appropriate option, then the details provided on the District Administration table may merge with the work indicated on the School Leadership Team table.

Some alternative structures for larger districts include:

- One or two staff members from each school serve as representatives on the district-level team. These staff members are responsible for communication between the district team and the school which they represent.
- Cluster groups of schools into ‘families.’ Staff representatives from each school within a family follow the stages of the process with each family creating a draft product. Representatives from each family bring their draft product to the district level for reviewing and combining into one comprehensive document. The combined document can be made available for feedback across the district before finalizing and adopting for district-wide implementation. This process allows all schools to have input into the work and ownership of the work.

Regardless of possible adaptations due to the size of the district, the process provides for collaborative involvement of all stakeholders within each of the stages that are necessary for designing and implementing a high-quality educational program capable of developing college and career ready students.

Forming Committees/Teams

OUTCOME: High performing committees/teams that work collaboratively to design, implement, and support a comprehensive curriculum to improve student learning.

GUIDING QUESTIONS:
- Are relevant stakeholder groups represented on the committee/team?
- Are the purpose and outcomes for the work clearly focused on alignment of the district’s teaching and learning systems with college and career ready standards?
- What training will be provided for the committee/team to enact practices and procedures of a high-performing team?
- How will the committee/team monitor its effectiveness during the work?
- How will communication about the work of the committee/team be accomplished?
- What funding will need to be budgeted to support the work?

Figure 3 Suggested Work Flow for Forming Committees/Teams

1. Identify need for committee/team
2. Communicate the formation of a committee/team
3. Form committee/team
4. Provide training on high-performing teams
5. Determine processes for communication and feedback on the team's work

</table>
OUTCOME: All stakeholders have a common understanding of learning expectations for students as identified by the standards. Staff systematically implement the identified standards.

GUIDING QUESTIONS:

• How have students been performing on current standards? Strengths? Areas for growth?
• What state, national, or industry standards are required for this content area/course?
• What do students need to know, understand, and be able to do according to the standards?
• What level of cognitive rigor (thinking) is required by the standards?
• What process will be used to unpack, or deconstruct, the standards into smaller learning targets?
• What are the essential, or priority, standards for each grade level?
• What process will be utilized to check for appropriate grade-to-grade build of learning?
• What professional learning will be needed to effectively understand and implement the standards?
• How will implementation of the standards be systemically supported?
• What process will be used to monitor implementation of the standards?
• What process will be used to communicate the standards to staff, students and parents?

Figure 4 Suggested Work Flow for Understanding and Implementing Standards

- Provide in-depth learning and understanding of standards appropriate to the committee/team
- Train committee/team on how to deconstruct the standards (know, understand, do, levels of reasoning)
- Design a process for gathering and responding to input on the work
- Finalize the work and/or product and prepare for implementation
- Plan and provide professional learning for implementation of the work
- Gather feedback on implementation and further professional learning needs

Determining Assessment Methods and Practices

OUTCOME: A balanced system of assessments aligned to the learning and rigor of the standards.

GUIDING QUESTIONS:

- What is the purpose for each assessment? Who are the users of and what are the uses of results for each?
- Is there a balanced system of assessments to measure students learning proficiency and growth (pre-, post-, ongoing)?
- What learning targets, or standards, will be assessed on each assessment? Do the items assess the level of rigor (thinking) required by the standards or targets?
- What components are needed to design high-quality, rigorous assessments?
- How will students be involved in the assessment process?
- How will students know what the evidence of learning needs to look like in order to demonstrate mastery?
- How will assessment results be communicated to students and parents?
- How aligned and effective is the report card for informing parents/guardians about student learning?
- What professional learning is needed to support high-quality, rigorous assessment design?
- What professional learning is needed to understand a standards-based reporting system?

Figure 5 Suggested Workflow for Determining Assessment Methods and Practices

1. Inventory current assessments and data collection systems
2. Determine assessment needs based on newly aligned standards and develop tools as needed
3. Survey staff to determine professional learning needs for assessment methods and practices
4. Review report card system for alignment to the standards
5. Communicate with staff about newly developed assessments, professional learning opportunities, and changes to the report card system
6. Gather input on new assessments and reporting system and determine future professional learning needs

Aligning Instructional Practices with Standards and Assessments

OUTCOME: Teachers utilize effective, research-based instructional practices and strategies.

GUIDING QUESTIONS:

- What high-yield instructional frameworks/models are used within each area of instruction?
- What high-yield instructional practices should teachers and district leaders consider as they prepare to implement?
- What components are necessary to support development of high-quality instructional units?
- How will instruction be differentiated to support all learners?
- Are instructional experiences aligned with the level of rigor (thinking) so that students are able to demonstrate mastery of the expected standards/targets?
- Are supports identified in the unit plan for students who have not yet learned the required standards/targets? For students who have already learned?
- What professional learning will be needed to support teachers in understanding and using the identified instructional framework and practices?
- How will implementation of identified instructional frameworks/models and practices be monitored for effectiveness?

Figure 6 Suggested Work Flow for Aligning Instructional Practices with Standards and Assessments

Research high-yield instructional frameworks/models and strategies → Determine high quality instructional unit components that address the needs of all learners → Design high quality instructional units based on high-yield instructional frameworks/models and incorporating high-yield instructional strategies → Plan professional learning opportunities to support implementation of instructional frameworks, strategies, and units → Gather feedback on professional learning opportunities to determine future professional learning needs

Reviewing and Selecting Resources

OUTCOME: Staff utilizes a variety of high-quality resources to support student learning of the standards.

GUIDING QUESTIONS:

- Do the instructional materials support the development of student proficiency with the knowledge and skills required by the standards?
- Do the instructional materials provide sufficient experiences that build in a logical way to support student learning of the standards within the grade level?
- Is the resource content progression across the grades consistent with the progression in the standards? (across grade question)
- What are the strengths and weaknesses of the instructional materials?
- If any gaps exist, can those gaps be realistically addressed with supplemental materials?
- Are adequate amounts of materials/resources available?
- What professional learning will be needed to effectively utilize materials/resources?

Figure 7 Suggested Work Flow for Reviewing and Selecting Resources

1. Identify gap between current resources and resources needed to align with standards
2. Research programs aligned to standards to address gaps
3. Establish a process for reviewing and selecting needed resources including consideration of the available budget
4. Determine timeline for review, selection, input, stakeholder communication, ordering, distribution, professional learning, and implementation
5. Develop a plan for supporting the professional learning needs of all staff
6. Gather input on implementation of the new resources and determine future learning needs

</table>
Engaging Parents/Guardians and Community

OUTCOME: Parents and community support students, educators, schools, and districts in increasing learning of students in the home and community.

GUIDING QUESTIONS:
- How will parents be informed about student learning expectations?
- How will parents be involved in reviewing and providing input into curriculum and instructional materials?
- What opportunities for collaboratively supporting student learning outside the school day can be offered in partnership with community organizations?
- What support will the district provide to support ongoing communication of student learning expectations?
- How are students involved in tracking, monitoring, and reporting their learning to parents/guardians?
- What systems are in place to support parents/guardians with student learning at home?

Figure 8 Suggested Workflow for Engaging Parents/Guardians and Community

Design processes for gathering input from parents/guardians regarding curricular programs and/or policies

Determine communication methods to inform parents/guardians about learning expectations

Develop and distribute materials to support learning at home

Examine processes for parent conferences and communication

Investigate possible partnerships with community organizations and colleges to support student learning

Establishing a System for Continuous Improvement

OUTCOME: Collaborative discussion of data that is timely, relevant to improve student learning, and focused on continuous improvement of the teaching and learning system.

GUIDING QUESTIONS:
- What assessment system is in place to measure student learning? Is the system a balanced system of assessment?
- What level of assessment literacy exists amongst all staff?
- How is a data management system utilized to provide timely data that is in an easy to use format?
- How are data trends and patterns used to measure student learning? How are data used to determine the greatest area of need?
- How are learning goals aligned throughout the system (i.e., student goals to individual teacher goals to team goals to school goals)?
- What professional learning will be provided to support assessment literacy and use of data to adjust instruction?
- How are students involved in analyzing their own learning data (goal setting, tracking and monitoring, etc.)?
- How does the system use data to continually improve the teaching and learning systems?

Figure 9 Suggested Work Flow for Establishing a System for Continuous Improvement

- Review data collection system for ease of use and timeliness of data
- Define a balanced system of assessments
- Analyze data for strengths and areas of focus at all levels
- Define a process for goal setting at all levels
- Plan professional learning for staff on assessment literacy and data analysis
- Gather feedback on assessment systems and professional learning to plan future professional learning needs of staff

---

**User Purpose:**

- Support committees/teams in understanding and unpacking standards into learning targets.

**District Administration Purpose:**

- Support committees/teams in understanding and unpacking standards into learning targets.
### User Purpose

**Union Leader Purpose:**
Support the work, final products, implementation, and professional learning identified by committees/teams.

### Awareness

- Working knowledge of current national and/or state standards
- Know strengths and areas for growth in student learning across the system
- Know the timeline for the work of the committee/team
- Know the process for gathering implementation data
- Determine availability of collaboration time for staff to discuss student learning expectations

### Planning

- Identify opportunities for staff to engage in deepening their understanding of the standards
- Provide time for teachers to review and provide feedback on draft work of the district committee/team

### Professional Learning Topics

- National and/or state standards
- Process used by the district committee/team for unpacking, identifying priority standards, and writing into student-friendly language
- Tool or scale used by the district committee/team for defining rigor
- Learning Forward’s Standards for Professional Learning

### Implementation and Monitoring

- Encourage all staff to provide feedback on the draft work of the committee/team
- Review the gathered implementation data
- Monitor, and share with district administration, obstacles to availability of collaboration time for teachers to discuss student learning expectations

### Communication and Feedback

- Broadcast and support the opportunity for feedback by all staff
- Broadcast and support implementation for the work of the committee/team
- Broadcast and support the opportunity for staff to provide input on professional learning needs

### School Leadership Team Purpose:
Engage school staff in understanding and implementing the work of committees/teams.

### Awareness

- Knowledge of current national and/or state standards
- Know student learning strengths and areas for growth at district, school, grade, and classroom levels
- Know the committee/team timeline for the work
- Know the process for gathering implementation data

### Planning

- Work with district administration and co-facilitator to:
  - Deepen knowledge of national and/or state standards
  - Design learning opportunities for committees/teams to deepen their understanding
  - Review and select the process for unpacking standards, identifying priority standards, and writing student-friendly language

### Professional Learning Topics

- National and/or state standards
- Tools and scales to define rigor
- Processes for unpacking standards, identifying priority standards, and writing into student-friendly language
- Learning Forward’s Standards for Professional Learning

### Implementation and Monitoring

- Provide collaboration time for staff to provide feedback on the draft work of the committee/team
- Support and monitor implementation of the committee/team work within the school
- Provide collaboration time for staff to discuss student learning expectations and needs
- Determine professional learning needs of staff

### Communication and Feedback

- Broadcast and support the opportunity for feedback by all staff
- Broadcast and support implementation for the work of the committee/team
- Share implementation data with school staff
- Discuss school professional learning needs with district administration
- Share learning expectations with parents
<table>

</thead>
</table>
| **Teacher, Specialist, and School Staff**  
*Purpose:* Know and prepare for implementing the work of district-level committees/teams.  
- Knowledge of current national and/or state standards  
- Know strengths and areas for growth in student learning at the district, school, grade, and classroom  
- Know the committee/team timeline for the work  
- Know the process for gathering implementation data  
| Work with grade level/department team to schedule time to:  
- Understand the standards  
- Incorporate the standards into classroom instruction  
- Provide feedback to the committee/team  
| National and/or state standards  
Process used by the district committee/team for unpacking, identifying priority standards, writing into student-friendly language  
Tool or scale used by the district committee/team for defining rigor  
Learning Forward’s Standards for Professional Learning  
| Implement with fidelity, the final work of the committee/team  
Discuss and support implementation within the department/grade level team during collaboration time  
Engage students in understanding expectations for learning  
Share student-friendly targets with students  
| Provide feedback on the work of the committee/team  
Provide feedback on what is working and what is impeding implementation of the standards  
Discuss professional learning needs with school administration and union leaders  
Share student-friendly learning targets with students for the year, units of instruction, and daily lessons  
Engage in conversations with students about their learning  
Share learning expectations with parents  |
| **Student Purpose:**  
*Purpose:* Know and understand the expectations for learning.  
- Know learning targets for the year/course/units of instruction

<th>Awareness</th>
<th>Planning</th>
<th>Professional Learning Topics</th>
<th>Implementation and Monitoring</th>
<th>Communication and Feedback</th>
</tr>
</thead>
</table>
| District Administration Purpose: Facilitate selection and/or design of high-quality, rigorous assessments. | - Effectiveness of current system of assessment  
- Availability of, or need for, a data collection system  
- Determine availability of collaboration time for staff to discuss assessment  
- Determine needs for staff learning on assessment design and assessment practices  
- Understand the importance of aligning assessment items to the learning targets/standards  
- Know the strengths and limitations of various data types and sources | - Work with union leadership to:  
  - Deepen understanding of high quality, rigorous assessment  
  - Form teams to develop district benchmark assessments  
  - Write a charge for creating a team to research and define a standards-based reporting system  
  - Plan professional learning for staff on high quality assessment and assessment for learning strategies | - Balanced assessment (formative, summative)  
- Components of high quality assessments  
- Effective assessment practices  
- Rubric design  
- Standards-based assessing and reporting  
- Learning Forward’s Standards for Professional Learning | - Monitor availability of collaboration time for staff to discuss assessment  
- Support design of meaningful, high quality assessments  
- Provide training on developing and examining classroom assessments  
- Provide training on assessment for learning strategies  
- Monitor staff satisfaction with assessment learning | - Communicate work and decisions of all committees/teams to Board of Education on a regular basis  
- Conduct a survey to determine the assessment literacy of teachers  
- Act upon the feedback received to improve or refine  
- Communicate actions taken based on feedback  
- Communicate the District system of balanced assessment |
<table>
